

KRAFT·Vibe Business Manager — Update Summary

2026-07-05 · kraftvibe-manager.html · all changes tested end-to-end, zero console errors

1. Navigation simplified — 11 tabs → 6

BEFORE	AFTER
Today, Dashboard, Daily 10, Leads, Customers, Follow-ups, Orders, Products, Inventory, Purchases, Billing	Today, Dashboard, Contacts, Orders, Stock, Billing

- **Contacts** = Leads + Customers merged, with an All/Leads/Customers toggle
- **Stock** = Products + Inventory + Purchases merged, with a segment toggle
- **Daily-10 & Follow-ups** — folded into the Today tab's "Contact today" list; still reachable via two buttons on Today ("Daily-10 list" / "All follow-ups"), just removed from the main nav bar

2. New "Today" tab — combined daily job card

SECTION	WHAT IT DOES
Contact today	Merges follow-ups (reorder due, sample feedback, catalog no-reply, function delivery) with Daily-10 leads, de-duplicated, most urgent first
Produce today	Auto-groups pending orders by product; shows a  /  raw-material sufficiency badge if a Bill of Materials is set on that product
Log production	Records product + qty made + worker name; automatically deducts raw material stock if a BOM is set
WhatsApp me today's digest	One-tap button that opens WhatsApp to your own number (7904505226) with a pre-filled summary — contacts due, pending order value, material shortages, low stock

True hands-free automation (no tap at all) needs the WhatsApp Business API + a backend — declined earlier due to Meta approval time and ongoing hosting cost. The digest button is the closest equivalent without that cost.

3. Bill of Materials + auto stock deduction

- Product edit form: optional "Consumes (raw material)" + "Qty per unit" fields
- Logging production for a product with a BOM set automatically reduces that raw material's inventory stock
- Tested: 340pc order against 50 units of stock correctly showed "290 short"; logging 20pc made correctly dropped stock 50→30

4. Sample tracking fixed

- "Sample" pipeline stage no longer shares the amber warning color with pending-orders/low-stock — now a calm blue
- "1-TIME" customer tag no longer reuses the sample pill's styling — has its own neutral tag color
- Typed sample tracking: Cover / Bag / Areca checkboxes on the customer form, each stamped with its own date, shown as tags on the contact row

- **New: "STALE SAMPLE" flag** — if a sample was given 14+ days ago with no decision, it now surfaces as the top-priority follow-up item instead of quietly repeating the same 2-day-old "SAMPLE" nudge forever

5. Logo & branding

- Customer logo auto-fetch: add a Website field on any contact, their favicon is fetched automatically and shown instead of initials (falls back gracefully if none found)
- Avatar/logo visual polish: subtle drop-shadow + ring border wherever a real logo image loads, distinguishing it from plain initials
- **Brand logo redesigned**: replaced the old cup/bag icon with an actual areca leaf plate (cream oval with concentric rim rings) flanked by two leaf shapes, on the same dark-green rounded-square background — applied consistently across the app header, the password-gate screen, the marketing site, the intro-video generator, and the app icon (regenerated at 1024×1024)

6. Reporting

- New Dashboard panel: "Production by worker — last 7 days", aggregated from the production log (addresses "who made how much" tracking)
- Data-safety nudge (backup reminder banner) was already in place — confirmed it correctly escalates after 7+ days without a backup

Still open — needs a decision, not guesswork

ITEM	WHY IT'S PARKED
Multi-device / multi-staff login	Requires a real backend + hosting — ongoing cost
Fully silent WhatsApp automation	Requires WhatsApp Business API + Meta approval + backend
Customer-facing order status page	Needs a hosting/access-control decision (who can see what)
Cloud backup (vs. manual export)	Needs a choice of where data lives (Google Sheet? Firebase? cost implications either way)
